

**REAL CASINO**

**BLOCKCHAIN CASINO**

CRYPTO CASINO FOR THE MASSES

---

## **BUILD IT AND THEY WILL COME!**

### **ENJOY IT, AND THEY WILL STAY – TRUST IT, AND THEY WILL RETURN.**

That is the key for any Casino business – building trust and delivering entertainment. We plan to use the public Blockchain and Ethereum platform to deliver exactly that – a platform that is truly fair and executed on the network that cannot be tampered with in any way. Our platform utilises this result and delivers it in a compelling & entertaining way.

A truly random result delivered in an entertaining way. Bitcoin Casinos are exploding, Ethereum Casinos are emerging. The future is bright and we are perfectly positioned with proven technology, drive, and a dream team to capture a significant share of this market.

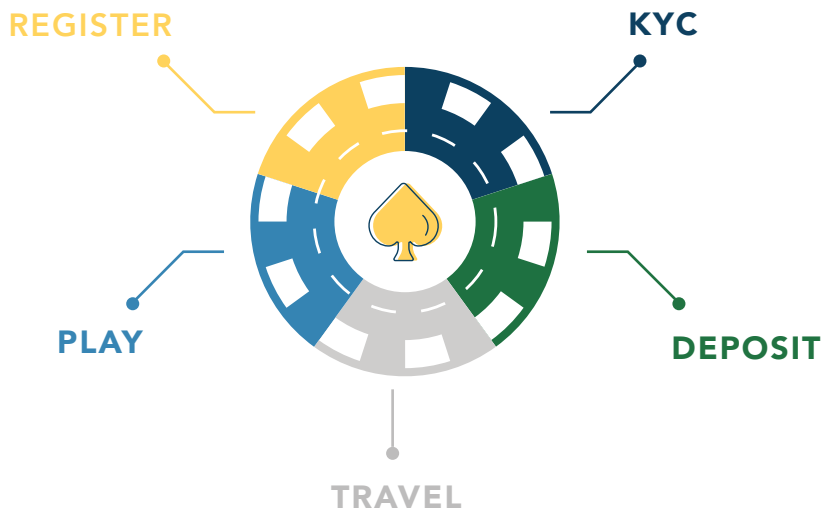

The key to trust is the random event – a trusted event that you can prove is truly fair and without any chance the casino can influence, predict or interfere with it. Land based Casinos deliver this via the physical equipment and trained croupiers, On-line casinos via established branding and crypto currency via technology (to date provably fair). With distributed autonomous technology the house has no control of the random number, and thus can prove it is 100% removed from the process.

## **REALCASINO IS A CRYPTO CURRENCY POWERED AND DISTRIBUTED GLOBAL CASINO**

RealCasino is a crypto currency powered and distributed Global casino that utilizes blockchain and smart contracts to deliver a truly fair gaming platform. Until recent times the online gambling market was very expensive for game developers to deploy successful apps thus the market is dominated by the big incumbents who operate on very high margins (in excess of 10%). The operator has the role of controlling the fairness of the gambling process, which can also lead to all sorts of problems – it has been very easy for programmers to fix the fairness of the random number. Previously elaborate Licensing and Regulatory arrangements have been implemented to assist in Player trust issues – these are no longer required with RealCasino technology.

Using decentralized technology and cryptographically verifiable code, the future of fair online gambling has just begun. The whole process is completely transparent and auditable. Without the possibility for fraud, and therefore without the need for the trusted third party, which has traditionally been played by legally empowered Regulatory body, simplifying the whole process. RealCasino is the real time online gambling platform that uses instant hardware driven distributed random numbers

delivered via the Blockchain, it provides complete transparency and security of the gaming process. Our crypto currency is called "Casino Hybrid Interactive Play System" or in short form, "CHIP", and it is powered by Ethereum, thus it can be held by any Ethereum based wallet. Our platform is end to end "CHIP" with no leakage to fiat currency – players play with "CHIP" and all providers within the platform are remunerated with "CHIP".

Our focus is to stimulate demand for "CHIP" and thus grow the value of our coin. Our sole strategy is to create demand. Part of demand growth strategy is to have approved Node Affiliates, like normal gaming Affiliates the Node owners will expand the user base, but they will also be duty bound to ensure the security of the platform. Self monitoring is all our responsibility.

It is demand that will drive the increase in the value of the coin, and demand that will attract top developers. This document will discuss in short the problems and solutions related to crypto currency based gambling games, as well as opportunities for innovative improvements for end users and also the fast and easy White Labelling we offer.

## 1. INTRODUCTION

As the founders of the first Live TV Roulette (NetplayTV PLC), our new project RealCasino builds upon a tradition of innovation and unique live gaming solutions for mass market participation.

We firmly believe that crypto based casinos will prove a major disruption to the online industry and change these types of games into secure, transparent and highly trusted processes.

We have the team of expert developers, the technology, focus and determination to become a major provider in the world of rapidly evolving online gambling innovations.

---

## 2. THE FUTURE OF CRYPTO BASED CASINOS

Bitcoin & Ethereum have transformed the online industry and removed the need for services providers, payment processing firms, server hosting, certification and many more suppliers in the chain. This will result in substantially lower operating costs for the operator and thus better and truly fair odds for the players.

Land-based & Online casinos typically operate at around 90-97% return to player. Crypto casinos offer 99.9% return to player and thus are disrupting the market – once the player discovers the higher Bonus ratios created by these lower costs they will simply not return to the established on-line operators.

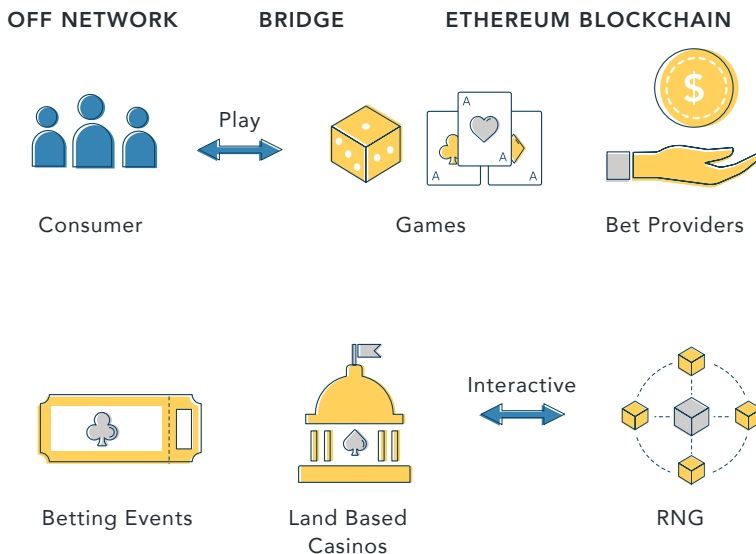

Soon the player base will better understand crypto technology, and will become comfortable with the functionality of a personal crypto wallet, then we believe players will migrate en mass to Crypto platforms.

Whilst many people today are aware of BitCoin, other virtual currencies, such as Ethereum have better scalability and are developing faster, by spawning our “CHIP” within this environment we believe we will be perfectly positioned to deliver a dynamic and creative platform toward this exponentially expanding market.

Mobile was once seen just as a niche industry in Casino and now dominates, mainly due to the power of the modern Smart devices available. Crypto based casinos will soon become the dominant platforms and this is the excellent point in time to use this marvellous opportunity for success. SmartPhones+Crypto+Gaming+Contactless transactions = The only way is up!

### 3. OUR MISSION

Our mission is to utilize the decentralized power of smart contracts to provide a global casino platform that delivers the games that the player typically expect (slots, table games, dice and Live Games) providing the ultimate transparent gaming experience in real time (consumers are not prepared to wait numerous seconds for a game result). 'NoiseNodes' are our unique hardware based distributed nodes, that generate a truly random number based upon quantum optics generation, via propriety systems. The host of the node is remunerated via a payment ("fuel") when the 'NoiseNode' is requested to deliver a result. The casino platform has no control as to which node is used and thus is fully distanced from the results. Our smart contract powered app delivers the seed to the player which is then in turn used to deliver results in real time for the games. This is essential – truly random results deliver by autonomous nodes out of our control.

### ■ 3.1 THE WOW FACTOR

Presentation and entertainment is key. Players want to immerse themselves in a truly engaging experience that has the graphics, sound and speed of existing casinos, plus the high quality content we have a track record for delivering already – once we have the trust of the consumer we will entertain them and captivate them so they return.

A server-less 24/7 globally distributed platform is an on-line operators and players dream, allowing for a cheaper, yet highly scalable product offering resulting in lower house costs.

This is exactly the service we will provide with Real Casino, these savings equals better customer offers, and more player loyalty.

To be truly successful and long term sustainable, a casino must, we believe, offer tradition RNG (Random Number Generated) games which are typically Keno types, slots and digital table games together with Live Games. A balanced mix. Players have traditionally expected this and will continue to do so in a crypto world. Our obligation is to meet their expectations and to respond to them in the most reliable and easiest-to-use way possible.

Crypto currency offerings bring many positives for the player (minimal KYC – players just love just one click registration, instant deposit and instant withdrawal), but they will also expect high quality content. And this demand is high priority for us. Crypto currency will grow to be a mass market product and an online casino must target the mass market – the present early adopter user base is tiny compared to the fiat currency platforms.

The current early adopters and the future players, want and deserve a trusted RNG (currently provided by Provably Fair, ([www.provablyfairplay.com](http://www.provablyfairplay.com)) and in the future DAO (Decentralised Autonomous Organisation) delivered random events that can be completely trusted. This is the number one issue that a crypto casino must crack - delivering results that are both trusted and unhackable. Our technology and team focuses on this aspect of the process and partners with trusted brands and developers to deliver the games and live feeds.

## 4. REAL CASINO PROJECT

**4.4**

FOCUS ON MASS  
MARKET

**4.5**

OUR GAMES

**4.6**

VIRTUAL RNG  
CASINO

**4.7**

LIVE GAMES

**4.8**

ENTERTAINMENT

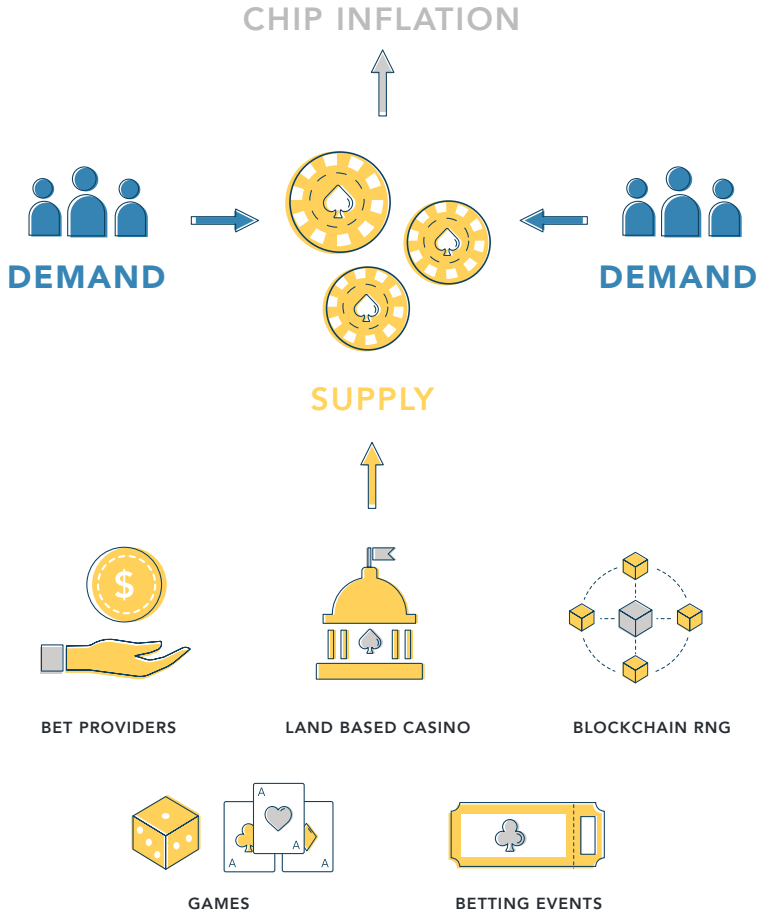

### 4.1 VIRTUAL CASINO

Our platform delivers a real casino experience using the Blockchain (technically this is called a smart contracts or scripts running Solidity). However, this is not all, and we are very proud to say that this soon to be patented technology is totally unique and a global first for the crypto casino industry.

We offer a HD quality Live Dealer experience that is Blockchain RNG powered. Our platform takes the real video and visualizes the results from DAO based events. This will work over all devices, all the time and in the most entertaining ways possible.

From this moment in online history, crypto players can fully audit and trust the results, which is the real breakthrough on this market.

#### 4.2 TOTAL OPPORTUNITY

In the last twenty years what we now call the Internet of Things has evolved at literally the speed of light; high speed fibre optic links for PC's, G2, G3 and now G4 and soon G5 mobile link speeds for phones, phablets, tablets et al. It's hard to keep up, and now the new financial opportunities arising from the crypto-sphere of digital

currencies is heading towards us just as fast, or even faster, as it's supported by what's preceded it.

The nascent opportunities presented by new, focused crypto's like our Ethereum based "CHIP" are the starting point for the next generation of existing gamers, to utilise, when they transfer toward pay-for-play gaming and away from Social based game events. RealCasino offerings will allow the next generation to transfer across within their group environment. They have grown up playing as a group, that won't change, it's their lifestyle; what must be offered to them is a platform which retains the social dynamic and brings with it the flexibility of virtual playment.

All this can be offered but with the vital factor of reduced operation costs (gas costs) and proper speeds of decision making for the players, and the games.

### 4.3 FOCUS ON MOBILE DEVICES

Real Casino goes beyond the desktop computers and brings to their audience the best, most exciting games at the tip of your fingers with Mobile Live Casino. We have fully developed versions for iPad, iPhone, Android Tablets as well as Android Smart Phone.

Our Mobile Live Casino is optimized to run smoothly and offer players new perks: an extended gaming floor and playing time frames, as well as new places to play.

Here are the samples of some of our already constructed games optimized as desktop, tablet and mobile versions.

#### 4.4 FOCUS ON MASS MARKET

Many companies will enter the crypto space. We believe that those which manage to survive and flourish will need both great technology and great content. The player is not really interested in what is under the hood, all the technical details and protocols. Our audience is oriented strictly toward the end results – they want to see a quality product and enjoy the entertainment for the experience it truly is.

Our experienced team is fully aware of the dramatic changes brought about to the player engagement sessions by the Mobile connected devices available today. In just a few years of entering the mobile domain the existing gaming companies have proven that now over 50% of all their revenues comes from mobile devices, and for some operators it's already 70% plus.

#### 4.5 OUR GAMES

We provide a mixture of provably fair, live croupier, automated and virtual games. And our extensive catalogue delivers over 30 games to our players. This catalogue includes mainstream and niche games like:

Roulette

Baccarat

Lotto

Wheel of Fortune

Sicbo

Poker

Virtual Sports

Our technology allows a game developer to develop a front end that then runs on our back end platform without the need to understand the complexity of building a complete gaming platform, This will radically disrupt the traditional model where the established gaming companies provide the end to end service and do not provide an audit trail for the transactions or random number.

#### 4.6 VIRTUAL RNG CASINO

The extensive catalogue we are offering, provides a host of games which are highly stylized and branded with stunning TV quality graphics. This virtual casino is completely developed in HTML5 for the easiest use and fully powered by the Blockchain for trust and transparency.

Our gaming platform is created for the browser based model and provides simply the best designed interface across desktop computers, hand held and mobile devices, using the HTML5 and WebGL standards. Yet at the same time, it is acceptable to the players who are used to app-based games.

Our Real Casino has not just been created for easy and comfortable use only for the players. We had in mind the gaming operators as well. Our focus was primarily on the elimination of possible server racks and costs which traditional gaming systems operate on. These hardware items can cost millions of dollars.

Our innovative technology can provide much lower costs for operating and running a functional casino, because we offer a Serverless and employee-less peer to peer casino, which is, far cheaper than the classical on-line version, burdened with fixed operations, hosting costs, payroll management and banking institutions. This is the next disruptive and newest level for the growing on-line gaming industry.

The following image displays just one of the many already created games in our catalogue. Simple, elegant and effective design, with an interface which provides an exciting and yet comfortable gaming experience for our players.

#### ■ 4.7 LIVE GAMES

The successful online casinos have always had a live offering – streaming a Live Dealer. We believe that as crypto currency becomes main stream this market will demand this also.

With a live game, the gaming machine delivers the decision (the random number) and this is trusted by the player as he can physically review it. There is no opportunity to replace the physical wheel with an autonomous result, so therefore we will embed these events into our platform.

#### ■ 4.8 ENTERTAINMENT

Team RealCasino have already created and provided Entertaining gaming content independently and with their existing partners. Team members have displayed the product and gained valuable public/press exposure at internationally recognised gaming events.

Our product is known, recognised and valued already; more importantly the content supply is seen to be what we believe is truly valuable – unique artistic creation, carefully constructed and expertly executed for the public domain. All this in a Regulated environment and still providing a fun experience.

## 5. INNOVATIVE SOLUTIONS

The challenges are numerous, but recently, international changes in the AML & Funding of Terrorism regulations have added greatly to the pressure, especially for the online gambling and fixed Casino industry. First of all, assets which are stored and used for online purposes are often impacted by unexpected charge-backs and manipulation. This fact affects the industries reputation the most.

Trusted third party platforms are required for almost all current financial transactions, which results in higher transaction and commission fees and slows the processes. The key element players expect – transparency, is missing and virtual items which belong to players can be used just on specific platforms, as well as manipulated and lost. Currencies are in most cases not easily transferable and usually intended to be used in a single game. In the case of a player being banned, that player will also lose all currency or items invested earlier, unless already in a highly regulated environment. This is the tradition of known centralized and locked platforms.

On the other side, new decentralized platforms still don't have standardized rules when it comes to currencies and other assets in the gaming world and users don't know what to expect, therefore they are refraining from taking the unknown risks. Also, there is no connection with the "real world" and players don't get rewarded for contribution, participation and winning in games. However, we are here with innovative solutions for these problems.

## 5.1 THE SPEED, TRUST AND INTERFACE CHALLENGES OF THE CRYPTO BASED CASINO

The public blockchain delivers decentralized and therefore safe, anonymous and transparent transactions and results. However, Blockchain transactions typically take in excess of 30 seconds on average (Bitcoin transactions typically take circa 1 hour). Clearly this is not acceptable in a gaming environment where the player expects instantaneous results. Also, as the technology is in its infancy, it is difficult to predict the transaction speed for executing scripts on the network over the coming months and years. Today there are only 500,000 Ethereum transactions per day – we expect this to grow to circa 5 Million within 12 months.

Therefore an operator must be clever – they need to deliver instant results, via the blockchain that are 100% provably fair and secure. At the same time, and having in mind the anonymous aspect of Blockchain technology, the operator must earn and retain the trust of the player to deliver integrity and stability.

We achieve this by deploying a network of up to 1,000 nodes that deliver hardware generated random numbers. The smart contract randomly selects a node to deliver the result and the host of the node is remunerated a small fraction of the transaction.

There remains the issue regarding the design of the interface still present. The current Blockchain casinos offer a very basic user interface and product range. Long term players will expect the presentation of traditional online casinos with all conformity they offered, whilst the new Social Gamer emigrating to RealCasino will expect full functionality.

## 5.2 REAL WORLD BRIDGE

Today there are over 6,000 Casinos in the world. The next 5-10 years there will clearly be a transition period, the anti-money laundering regulations are important, and virtual currencies like "CHIP" can play a part in securing and protecting both players and operators alike. Players will continue to use online and land based casinos. Our technology can act as a bridge between the old world and the new.

"CHIP" can be refunded for local casino Chips at any casino in the world. The player simply indicates to us the casino in which he wishes to play and the "CHIP" are converted for local play via our exclusive CHIP trading platform. The barrier to this element of success is the signing up of the land based Casinos, however, very rapidly the existing operators are converting their product to on-line friendly transmittable offerings. This trend will not decline, nor change direction. If you recall, once upon a time, some folks thought mobile phones were a luxury, now they are understood to be vital to our present day lifestyle.

### CONTINUED PLAY

The system also works in reverse. The player can continue to play at his favourite table once he leaves the casino. The local casino simply has to install a 'LiveNode' and they can stream the table to the player for continued play and revenue.

Ultimately the land based casinos will evolve into crypto based resorts - using random numbers, but we see this as a circa 10 year transition and during this transition period we will facilitate the connection between the old world and the new.

This synchronicity programme will allow us to grow the player base as rapidly as the casinos transit toward the virtual gaming world – something already occurring. Adopting our technology will assist in the attracting of players from both the crypto world and the conventional casino player.

## 5.3 FOCUS ON CUSTOMERS AND NEW OPPORTUNITIES

A key focus of our technology is player acquisition. Our games are aimed at the soft end of the market - the mass market. People that may be new to gaming and crypto casinos, are also looking for a trusted fun environment in which they can freely play without feeling intimidated. The new opportunities for gaining the larger audience are seen through the following characteristics.

### 5.3.1 PUBLIC ANONYMOUS & DISTRIBUTED NETWORKS

Crypto based casinos utilize the public blockchain for deposits, events and withdrawals. Typically the sign up process is instant, as the crypto provider has already KYC'd the customer. This makes the complete process much easier for players and provides them with the instant attraction they experience in a traditional casino and expect from us. They are able to bypass local banks and legislation to participate in a truly global experience. Thus, it is a very exciting time for the crypto currency based casino market.

### 5.3.2 NO MORE MIDDLEMEN

Etherum removes so many middlemen - server hosting, certification, licensing, compliance, overheads - that is what ultimately the big players look for - sites that offer the best rate of return for their play.

The lower gas costs will provide the operator the ability to offer better Bonus events and if the SportsBook is engaged, then better Odds too.

Once the system is set, you and your players don't have anything to worry about. There is no third trusted party to be paid, no costs for licensing or certification and no server or technical expenses. Everything is fully automated, auditable and completely transparent and fair for players.

### ■ 5.3.3 INSTANT REGISTRATION

Due to Blockchain wallet architecture each player can register with one simple click and receive a wallet address for deposits and withdrawals.

### ■ 5.3.4 DISTRIBUTED PLATFORM

Our platform is actually the complete building blocks that an operator requires to build an online casino. We are not the house and we do not take any risk on bets placed – we merely accept bets and send them out to the network to be processed by third parties. Our platform ensures the 3rd party has the funds to cover the risk, this is a product of the 'Smart Contract' technology. A wager from a player can only be processed by a Node that can cover the risk – either as a single operator or part of a syndicate. Thus a small casino can offer VIP bets with no more risk than a larger operator. The node system protects both parties.

## ■ 5.4 OUR UNIQUE OFFER

To be successful in the Blockchain Casino market you need to have a strong proposition. Having this in mind, we offer:

- ✓ In-house developed platform that supports most crypto currencies
- ✓ Distributed virtual events (random numbers) that are delivered fast with a full audit trail and transparency
- ✓ Live real events that are distributed to the network
- ✓ Distributed bet processing network allowing operators to easily join our network
- ✓ Reliable, top of the line platform to maximize gaming business growth
- ✓ Open framework to be accessible for skilled Developers

### ■ 5.4.1 TRANSACTION SPEED

To be successful any type of crypto casino must offer a trusted result (the Blockchain) and virtually instantaneously. Players simply will not wait too long between decisions, this was the universal problem until our solution was created.

We overcame this limitation by using the blockchain and smart contracts to deliver a seed, unique to the player and a key unique to the platform. Both of these keys are generated once at the beginning of the session and published at the end. Thus we do not have to request from the miners a result for every spin - we create a random result from the result of the two keys. This has the advantage of a fully random transparent result that has a complete audit trail, from initiation to conclusion.

Our platform and gaming content is 100% developed in house - allowing us to easily adapt and improve as crypto technology expands. At the same time our exclusive user interfaces, shown as the game screens, are both stylish and branded, offering players optimal user experiences for desktop, laptop, tablet and mobile versions.

### ■ 5.4.2 BEST ODDS

When referring to best odds, we particularly have in mind the best returns for the players combined with the best (lowest) gas costs toward the operator. The Node system not only speeds up the decision opportunity processes, but also reduces the costs of the transactions. These in turn can be reflected toward the player by improving the game RTP or creating better cost/value Bonus packages.

Our system is completely transparent, fully auditable and very comfortable to use. This will attract dedicated players, as well as many new users.

## ■ 5.5 FAST WHITE LAB ENGINE

We provide to our partners a full white label engine if they wish to host their own domain name. This is a marvellous business opportunity for those who can seize the moment of the new, profitable, and very soon, leading sector in the online world of gambling.

### WHITE LABEL PLATFORM ATTRIBUTES

- A reliable, expandable, and adaptable casino solution
- Quick setup process - typically 1-2 days for a fully functioning domain
- Fast distribution
- Fast ROI (Return on Investment)
- High security

### OUR PLATFORM PROVIDES

- Comprehensive Back office
- Branding Engine
- Odds & Risk Management – especially valuable for SportsBook elements.
- 100% Blockchain hosting and powered - no need for server infrastructure.

## ■ 5.6 EXPONENTIAL GROWTH

When it comes to projecting the future, it's always the Black Swan events which surprise. The current strong increases of online search for the best gambling games are a known indicator of the potential development of this industry. Users are more than interested and they are actively looking for the most comfortable and truly fair gambling games which are safe and easy to use. The lower operating costs and better offers a RealCasino partner can employ will be part of the successful packages that can be delivered.

## 6. TEAM OF DEVELOPERS

The team behind Real Casino has over 10 years of experience in building highly successful interactive formats that scaled to mass market participation in over 30 countries. We hire only trustworthy enthusiasts which are leaders in their fields of expertise, unique individuals who are dedicated to high ethical standards, always on the front edge of the latest developments and with their heads totally committed to our project.

We firmly believe that the online gambling world will become a provably honest and safe place for players and operators. We are on the right track to achieve this dream.

## SWOT

### STRENGTHS

- AAA Management team
- Track Record
- AAA Team Dev
- Completed Product
- Live Customers
- Time to Market
- Track Record
- Hybrid Approach
- Borderless
- Autonomous
- Staff Token Structure

### WEAKNESSES

- Under developed marketing
- Limited brand awareness
- Live Customers
- Low-level blockchain activities

### OPPORTUNITIES

- Disrupt Online Providers
- Real World Bridge old & New
- Establish the Platform
- Establish Global Standard
- Drive traffic & revenue to partners
- Drive Demand for our Token
- Early Adopter Advantages

### THREATS

- Competition
- Regulation
- Cyber Attack candidate by damaged rivals

## ■ 7. TECHNOLOGY COMPONENTS

### **NoiseNodes**

“NoiseNodes” are our unique hardware powered nodes that deliver a truly random number derived from diffraction optics, these are used by many of the largest and most reputable operators currently for standard RNG production.

Our unique approach combines the blockchain with the distributed hardware nodes that instantaneously generate random numbers. The smart contract randomly selects a node to deliver the result and the host of the node is remunerated a small fraction of the transaction. The entire process is seamless and totally transparent to the player. Our technology can process over 100,000 transactions per second.

### **Smart Bet Miners**

Our platform accepts bets from players and randomly distributes them to the network to be processed by a miner. The miners bid for the contract offering odds and stake limits. This delivers a unique complete chain with extremely competitive odds, due to the low house costs. The distributed and anonymous nature of the network allows bets to be processed without reference to geographical areas. It is unknown by who or where the bets are settled.

## 8. ICO CALCULATIONS

Because of insisting on transparency and security every step along the way during the creation and implementation of our online gambling systems, we also want to show clearly how the use of funds will be arranged and how we intend to develop this project further.

### MARKETING

We believe marketing is the most important element to achieve a broad reach into the mass market. This industry needs to attract and educate the new player base to better understand the advantages of Crypto Casinos and their fairer chances while using the random number generation through our online gambling games.

### DEVELOPMENT

As the industry develops and new technology is released to cure present issues (notably transaction speed) we will adapt our technology and platform aiming for the optimal conditions for our users.

### LIVE STUDIO

Our in-house live studio runs on robotics and low cost technology, which means that virtual events are allowing us to deliver a live studio at a low cost. We will eventually outsource this part of the process to lower the expenses further.

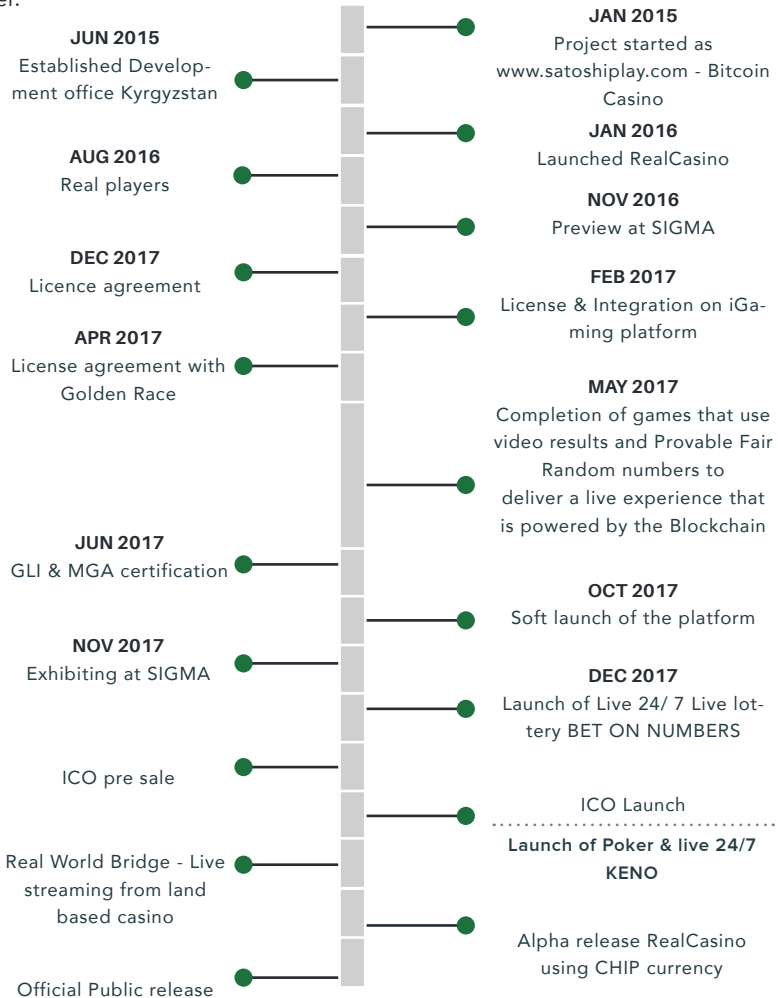

### ADMINISTRATION

During the preparation phase of the project we have already calculated the costs of the administration tasks, and in this sense, we don't expect any unexpected additional expense.

## 9. ROADMAP

This ICO campaign is thoroughly planned and prepared, and our expert's team is completely ready to continue the projected steps toward our ultimate success.

As you can see below, we have already achieved a large part of these assignments and now we plan to launch the platform and ICO campaign via this White Paper.

## FACTORS FOR SUCCESS

EXPERIENCE

LOWER COSTS

ENTERTAINMENT

BALANCE

TRUST

### 10. DISCLAIMER

At the date of the publication of the White Paper, the only use for CHIP is within the RealCasino platform and system.

Real Casino is the real time online gambling platform that uses hardware driven distributed random numbers delivered via the Blockchain, it provides the complete transparency and security of the gaming process. Our currency is called "CHIP" it is powered by Ethereum, thus it can be held by any Ethereum based wallet.

CHIP are intended to be refunded for local casino Chips at any casino in the world. The player simply indicates to us the casino in which he wishes to play and the CHIP are converted for local play via our exclusive chip trading platform.

Players will assume risk during the participation in gaming and online gaming has inherent risks. This means that software could be subject to attack, bugs or operators' errors, as well as, the House could go bankrupt or suffer a 'Force Majeur' event. These or other unforeseen problems could result in the loss of stored value.

"CHIP" could be impacted by regulatory action, including restrictions on ownership, use or possession, or other governmental or business obligations.
